

MCM Center Coverage Platform

Enterprise platform for multi-vehicle heatmaps, automatic fault diagnosis, RF planning and SLA reports.

Featured

Software

Network & RF management

In development

KEY FEATURES

Multi-session, multi-vehicle heatmaps on live and offline maps

Automatic diagnosis: vehicle fault, problem zone or interference

RF link planning and coverage simulation calibrated with field data

Site inventory, up/down/degraded status, alarms and SLA reports

TYPICAL APPLICATIONS

Network operations for large mining fleets

Infrastructure planning and investment decisions

Management reporting on connectivity as a productivity variable

TECHNICAL HIGHLIGHTS

DEPLOYMENT	On-premise or cloud, Linux or Docker
USERS	Role-based access, directory integration
INTEGRATIONS	REST API, webhooks, fleet management systems
REPORTS	PDF, DOCX, XLSX, KMZ
STATUS	In development

Indicative specifications, confirmed per project.

INDUSTRIES

Mining

Telecom & private networks

Energy & utilities

Ports & logistics

Featured ITTC product, available through vertical partners.

100% B2B. Supplied through ITTC partner companies specialized in each vertical. Contact us for the partner in your sector, a quotation or a technical briefing.
